Conversations with Eliza: on Gender and Artificial Intelligence

Keywords: Artificial Intelligence; Chatbots;
Anthropomorphization; Gender; Femininity;
Stereotypes.

Photo: Hanns Holger Rutz

Abstract:

This project seeks to explore artificial intelligence and how it portrays the female gender, by developing different chatbots inspired by everyday AIs, like Siri or Alexa and assigning them particular female archetypes. *Conversations with ELIZA* focuses on how these digital assistants reinforce traditional gender roles and, potentially, accentuate cultural stereotypes, questioning the predominance of the female gender in artificial intelligence.
